The original belloo format

belloo dog waste bags

Our recycling bags are made from **high-quality recycled plastic waste**.

Instead of producing new plastic, we give proven raw materials a **second, meaningful life**.

The result?

- Significantly **less waste**
- Noticeably **lower CO2 emissions**
- A genuine contribution to the **circular economy**
- **real impact instead of greenwashing**

And because responsible treatment of the environment should also be visible in everyday life, our bags come in **bold signal colours: red or blue**.

They gently but unmistakably remind every dog owner: "Take your responsibility – for clean parks, paths and nature." At the same time, if disposed of incorrectly, they immediately stand out – making checks easier and **helping keep our shared environment cleaner**.

In short:

You're not getting "just" a bag.

You're choosing the **most ecologically intelligent and effective solution** currently available on the market – for your municipality and for nature.

Recycling bags. Because sustainability doesn't need compromises

Recycle PURE

red
A520.01.E

blue
A520.03.E

If eco-friendly, then do it right!
The recycled content of this bag consists entirely of PCR material (Post-Consumer Recycled), making it the most environmentally friendly bag on the market. Certification with the Blue Angel environmental label guarantees sustainability at the highest level.

Recycle MIX

red
A510.51.E

black
A510.52.E

blue
A510.53.E

As the name already suggests, this film consists of a mix of virgin and recycled plastic and is the second recycling bag in our range. Due to production reasons, the recycled content ranges between 20% and 35%. Even so, it still saves valuable resources.

Recycle belloo

red
A582.01

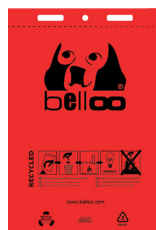

black
A582.02

A budget-friendly recycled dog poop bag is the Recycle belloo. The bag is produced with a film thickness of 15 µm and comes in the colours red and black.

Recycle belloo XL

red
A530.02

A wide recycled dog poop bag is the Recycle belloo XL. The bag is produced with a film thickness of 15 µm and comes in the colour red.

Standard belloo

red
A540.01.E

The standard belloo dog poop bag is made 100 % from virgin granulate and is therefore the only bag in our range that contains no recycled material.

FAQs about dog waste bags

Why don't we offer biodegradable/compostable bags in our range?

Dog faeces does not belong in compost – and so-called “biodegradable” poop bags change absolutely nothing about that. Dog faeces must **not** be composted – neither in your home compost heap nor in industrial biogas plants or composting facilities.

Why not? Because it can contain potentially dangerous pathogens, parasites (e.g. worms such as *Toxocara*) and bacteria that pose risks to humans, animals and agriculture. For this reason, it must be disposed of with residual waste and incinerated. **Dog poop bags made of corn starch, PLA or materials labelled as “compostable” are not a sustainable solution – quite the opposite: in practice they very rarely deliver the promised benefits.** These bags never end up in the compost anyway – neither in private nor in industrial facilities. Many composting plants actively filter them out because they **disrupt the process**.

Instead, the **“bio” or “compostable” label** often misleadingly suggests to dog owners: “Then I can just throw it in the organic bin – or even leave it lying around?” This frequently leads to incorrect disposal and therefore **more pollution rather than less**.

Conclusion:

1. Even “biodegradable” or “compostable” dog poop bags do not make dog faeces compostable – it still belongs in residual waste.
2. Biodegradable poop bags don't solve a problem – they often create a new one.
3. **Real environmental protection begins with correct disposal – not with marketing.**

Practica belloo: Simply improving the environment!
We look forward to helping you optimise your environment!

Are there “100 %” recycled or bio/compostable bags?

To stabilise and colour the products, additional substances are added to the granulate. Because of these additives, claiming “100 %” would be a clear lie.

What recycled content percentage do we achieve?

The environmental label “Blue Angel” guarantees a recycled content of at least 80 %. Our Blue Angel-certified Recycle PURE bags achieve a recycled content of 92 to 96 %, depending on production conditions.

How can I recognise genuine recycling bags?

Even with the most modern recycling plants, it is not possible to remove all foreign substances from the film. It is precisely these visible and tangible foreign particles that allow the end consumer to very easily recognise genuine, pure recycling material.
